Method and Provenance

SIMULATED DATA – NOT REAL CLOUD MEASUREMENTS

README.md; reports/methodology.md; docs/metric_definitions.md

item	description
Data mode	DEMO
Raw data	C:\Users\Admin\Downloads\deadlinePhucHoang\demo_data
Units	Latency ms; durations s; throughput req/s; money USD/month; ratios already in percent where _pct
Statistics	Per-run metric snapshots; CI from independent-run bootstrap, not pooled request percentiles
Raw requests	results\processed\demo\requests.csv; original JSONL retained under dataset raw/
Outliers and errors	Retained. Invalid/conflicting records quarantined; see quality.json
Cold scope	Process-first != infrastructure cold. Confirmed needs independent platform evidence
Scaling scope	Minute samples; interval bounds. IaaS fixed VM = N/A
Cost scope	Estimate from public prices + explicit workload assumptions, not invoice
Workbook calculations	Overview and cost reconciliation are Excel formulas. Complex model/CI are frozen Python outputs
Refresh	Run analyze -> cost -> export. Excel fullCalcOnLoad recalculates formula summaries
Excel colors	Blue inputs/selectors; green worksheet references; black calculations; amber missing/DEMO
Real measurement	NOT EXECUTED
